 Portfolio

### PROFILE

Dynamic Business & Data Analyst with 3+ years of experience specializing in predictive modeling and workflow automation. Expert in the Python/BigQuery/Power BI stack, with a focus on delivering high-integrity data solutions and KPI tracking. Adept at collaborating with cross-functional teams to turn statistical insights into measurable business growth and operational efficiency

### PROFESSIONAL EXPERINCE

#### Data Analyst, PDA infotech

11/2024 – Present

Dubai, UAE

- Designed and deployed predictive analytics and machine learning models (churn, CLV, segmentation, conversion) for retail and SaaS clients, improving retention by **18%**, boosting trial-to-paid conversion by **25%**, and generating **AED 150K** in quarterly revenue.
- Developed and maintained data models and interactive dashboards in Power BI (DAX, Power Query), delivering KPI-driven insights across sales, marketing, and customer success, supporting operational execution and board-level reporting.
- Built automated ETL pipelines and reporting workflows using Google Big Query, Python, and Google Sheets, enhancing data integrity, compliance, and governance, and reducing manual reporting effort by **60%** while enabling real-time business intelligence.
- Prepared and presented strategic dashboards and financial models (forecasting, budgeting, performance analysis) to the C-suite team, directly influencing quarterly planning and long-term strategy.
- Partnered with cross-functional teams (Finance, Sales, Marketing, Product) to convert analytics into actionable strategies, improving campaign ROI, optimizing sales targeting, and enhancing stakeholder alignment across departments.
- Enhanced data quality and decision-making by implementing governance frameworks (validation, standardization, metadata), conducting statistical analysis and A/B testing, and driving data storytelling consistency across global and local business units.

#### Data Science Intern, Ai Variant

06/2023 – 08/2024

Hyderabad, India

- Conducted sentiment analysis on customer reviews from e-commerce platforms, enhancing classification accuracy by **10%** through extensive feature engineering and model tuning with Python, NLTK, and Scikit learn.
- Analyzed data to uncover insightful patterns, enabling targeted marketing strategies and improved customer satisfaction.
- Developed an automated data scraping tool using Selenium for real-time sentiment analysis, conducting business process analysis to identify critical gaps. Established and presented Key Performance Indicators (KPIs) to management, enabling actionable execution plans and effective monitoring of customer feedback and market trends.
- Created a time series forecasting model for stock prices in NSE and foreign stock markets, collaborating with Black Rock Company. Integrated LSTM, ARIMA, and Prophet models, achieving a **15%** reduction in RMSE and predicting stock trends with **85%** accuracy, thereby facilitating informed investment decisions.
- Designed a predictive model for solar power generation at Cygni Energy Private Limited, achieving an **88%** accuracy rate. This model assisted the company in optimizing resource allocation and reducing operational costs by **6%**, showcasing the impact of data-driven insights on energy management.
- Built a predictive model for bankruptcy prevention using Logistic Regression, Random Forest, and Gradient Boosting, reducing false positives by **18%** and improving overall accuracy by **22%**. This proactive approach helped companies identify at-risk firms earlier, potentially saving millions in financial losses.

#### Business Analyst, Amazon

05/2022 – 05/2023

Hyderabad, India

- Spearheaded the design and implementation of Excel macros, automating seller support and daily operations. Achieved a **10%** increase in process efficiency, significantly reducing manual workload.
- Developed and documented the SOP for the transparency project, detailing every step of the process, which enabled team members to easily follow and implement the workflow.
- Improved the transparency process by automating manual tasks using macros, resulting in a **15%** reduction in the time required for daily operations.
- Leveraged Hubble Query Language and ETL processes to extract, transform, and load data, optimizing data flow and enhancing catalog management accuracy.
- Played a key role in the Seller Flex and transparency projects by automating routine processes, minimizing manual intervention, and boosting task precision.

- Partnered with diverse teams to improve seller support systems, fostering a more streamlined and efficient workflow across departments.
- Employed automation tools and data analysis to consistently monitor and enhance cataloging processes, ensuring high standards of data integrity and operational excellence

 EDUCATION

**B. Tech in Mechanical Engineering,**  
Jawaharlal Nehru Technological University Hyderabad  
GPA: First Class

05/2015 – 05/2019  
Mahabubnagar, Telangana.

 CERTIFICATIONS

**Data Science Certification | Excler Solutions**  
May 22, 2023

**Master's Program in Data Science | NASSCOM, Government of India**  
Aug 12, 2023

**Machine Learning with Python | IBM Developer Skills Network**  
July 24, 2023

**Python 101 for Data Science | IBM Developer Skills Network**  
July 25, 2023

 CORE SKILLS

**Languages/Tools**

- Python, Power BI, Advanced Excel

**Packages**

- Scikit-learn, TensorFlow, Keras, Pandas, NumPy, Matplotlib, Seaborn, Plotly

**Databases**

- PostgreSQL, MySQL, ETL, Hubble

**Framework**

- Stream lit, Flask, RESTful API

**DevOps**

- GitHub, Azure Cloud, AWS

 PROJECTS

**Bankruptcy Prevention**  , *Risk Assessment & Ensemble Machine Learning* 03/2024 – 04/2024

Engineered a predictive system to identify financial distress in firms using **Logistic Regression, Random Forest, and Gradient Boosting**. By implementing an ensemble methodology, I **improved classification accuracy by 22%** and reduced false positives by **18%**, enabling earlier intervention and more reliable risk mitigation for stakeholders.

**Apple Stock Forecasting**  , *Time Series Analysis & Predictive Modeling* 01/2024 – 02/2024

Developed a high-precision forecasting framework using **LSTM, ARIMA, and Prophet** to predict Apple stock trends. By engineering an ensemble approach, I achieved a **15% reduction in RMSE** compared to baseline models and maintained an **85% prediction accuracy**, providing a robust tool for data-driven investment strategies.

**NLP Sentiment & Classification Analysis**  , *Customer Intelligence & Automated Web Scraping* 05/2024 – 06/2024

Built an end-to-end NLP pipeline to analyze Amazon customer reviews using **NLTK, Scikit-learn, and Selenium**. I automated real-time data collection and applied advanced feature engineering, resulting in a **20% increase in sentiment classification accuracy**, allowing for targeted marketing insights and improved brand sentiment tracking.

**Solar Power Prediction**  , *Renewable Energy Optimization & Deployment* 07/2024 – 08/2024

Created a machine learning solution to estimate solar energy output using **XGBoost and Gradient Boosting**, achieving **88% accuracy**. I deployed the model via a **Streamlit** dashboard, providing energy companies with a tool that optimized resource allocation and contributed to a **12% reduction in operational costs** through better grid management.
